

# Fully Integrated Sage 300cloud Financial Reporting

Now you can design and print Sage 300 financial statements without ever having to leave Sage 300

## It's easier than **easy**...

FRS is not only the most powerful financial reporter on the market, it's also incredibly easy to use. The print screen is the same as the old Sage 300 FR print screen and the report designer is just like the old Excel add-in, except in a much easier to use, standard Sage 300 user interface. FRS requires no external applications like Excel, so no additional set-up or configuration and no additional support or training. FRS supports all 60 FR financial fields from BALP to BALPY#PA making the conversion of reports from FR to FRS a breeze.

### Outstanding Features

Advanced features like multi-company consolidations, report sets, bulk emailing, scheduling with the Windows task scheduler and printing of reports in any currency as well as all standard Sage 300 features like VBA macros.

### Advanced Functionality

Row, Column and Data Sets mean you only need to make changes once - rather than in every report and ensures consistency between reports. Fully automate the regular distribution of user-defined report sets to various recipient groups throughout the organisation.

### Incredibly Powerful

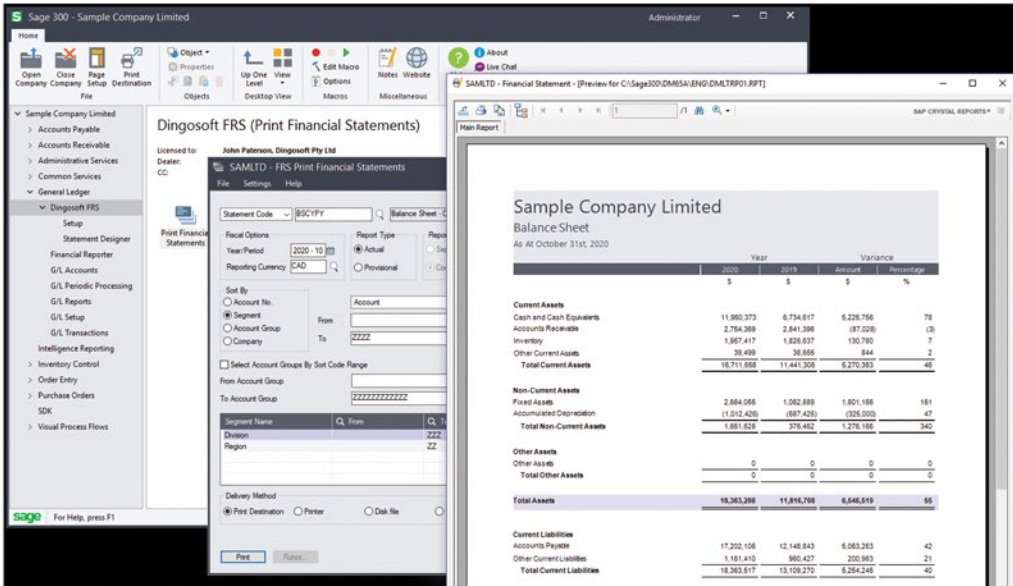

FRS has all the features of other leading financial reporters and more. However, other FR's print direct to the printer, whereas FRS uses the Crystal report engine which gives you a whole new level of power and flexibility.

### Hybrid Desktop/Cloud

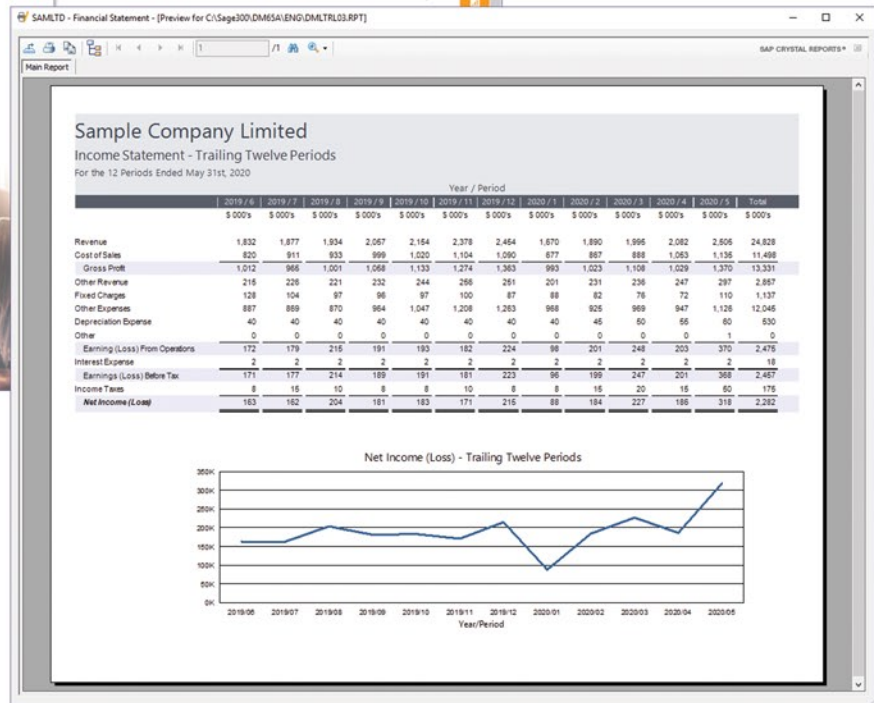

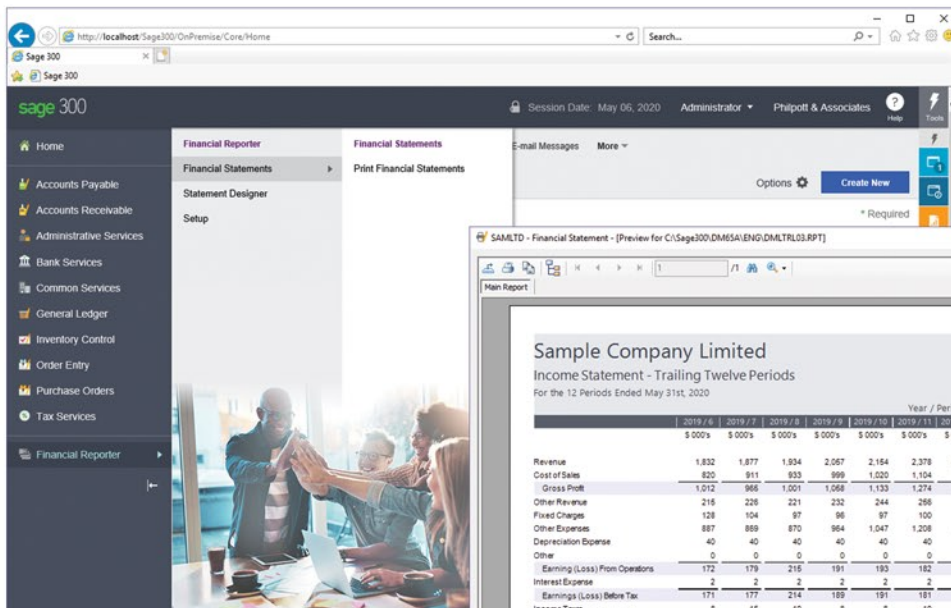

Innovative, patent pending technology means you can for the first time print all your financial statements with Crystal reports. FRS is developed in the Sage 300 SDK making it compatible with Sage 300 desktop, web screens or anywhere else you can run Sage 300.

# FRS™ The New Financial Reporter for Sage 300cloud

## Features & Benefits

- Easy to use report designer
- Reusable row, column and data sets
- Multi-company reports/consolidations
- Schedule reports to run automatically
