

# FRS™

## Financial Reporter for Sage 300 & 300c

### FRS is a true Sage 300 **SDK** module

Now you can design and print Sage 300 financial statements without ever having to leave Sage 300

## How to be innovative?

Everyone knows you can't print financial statements with Crystal Reports right? Wrong! In the past we have always had to have two report writers - one for general reports and a separate report writer for financial statements. Well, now with Dingosoft's patented technology, you can print all your reports with Crystal which means greater efficiencies and cost saving all round both on the desktop and in the cloud giving you true freedom of choice.

### Creative Concept

FRS combines all the best features of the Sage 300 financial reporter with all the best features of Microsoft FRx plus a whole lot more to give you the most advanced financial reporter ever developed.

### Market Analysis

Now that Sage 300c has a new fully integrated, best in class Financial Reporting module, it becomes a real option for existing Sage 300 users as well as prospects looking for a great cloud accounting system.

### Outstanding Features

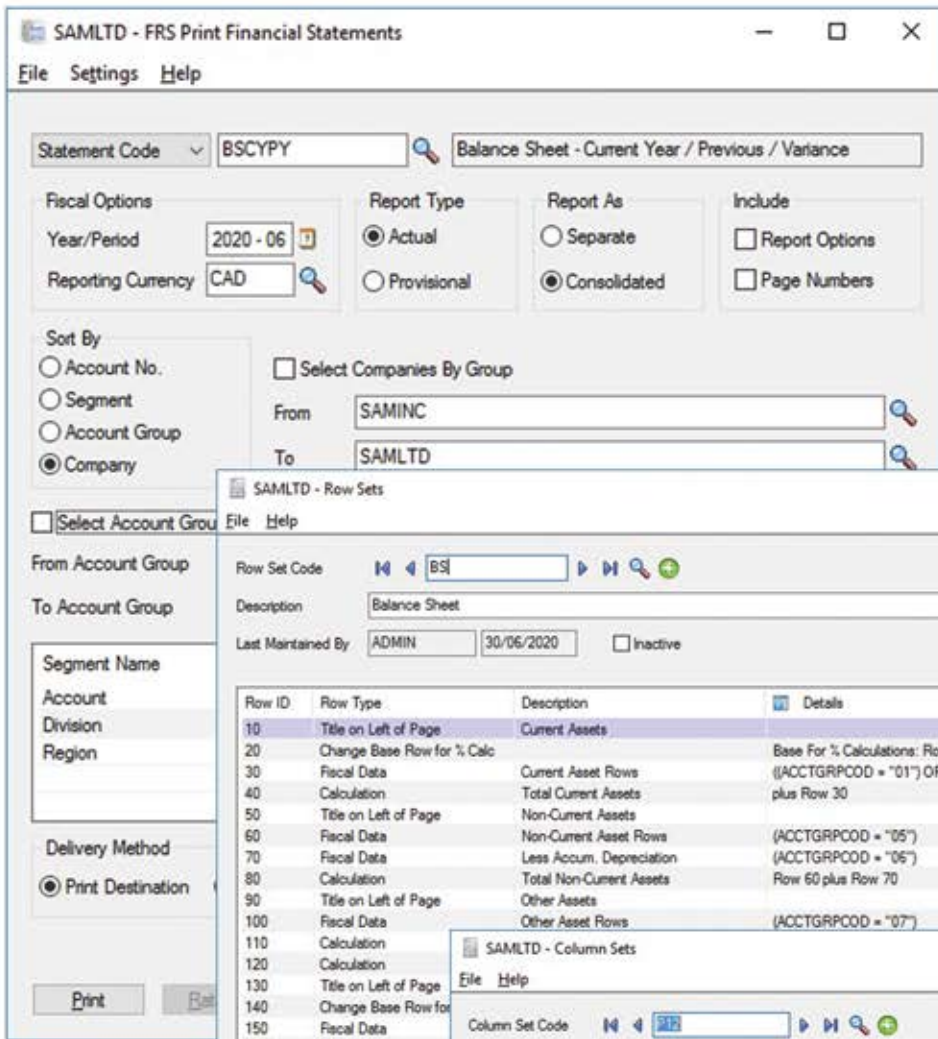

True Row, Column and Data Sets that can be referenced by (not copied to) reports means that you can for example have multiple reports all using the one row set and if a change is required you only need to change the one row set rather than every report.

### Problem Solver

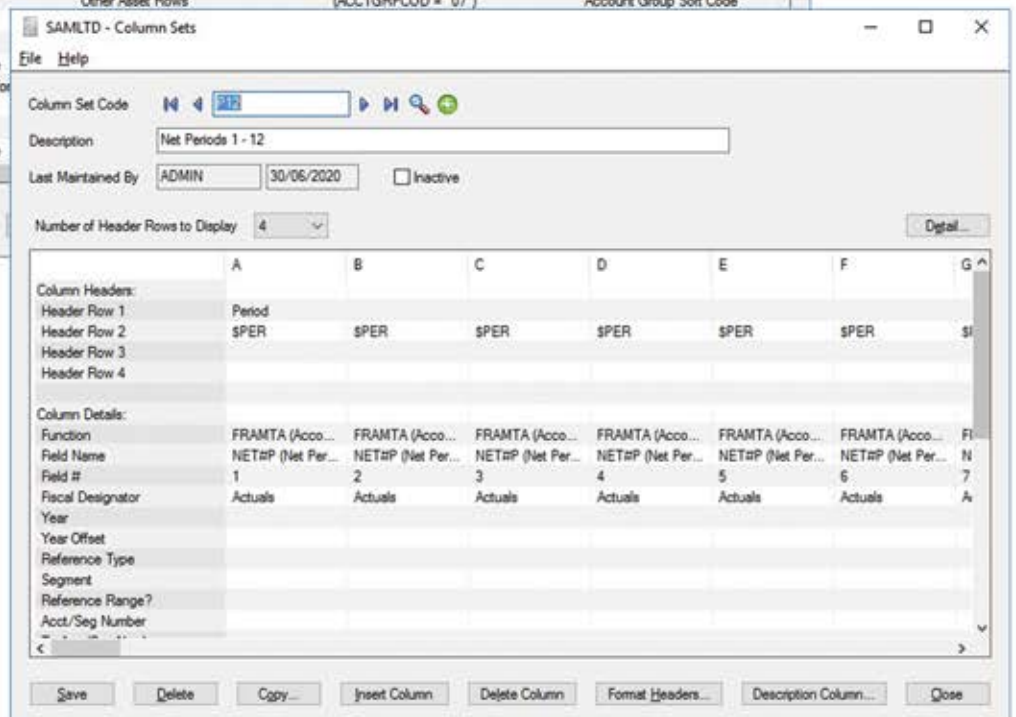

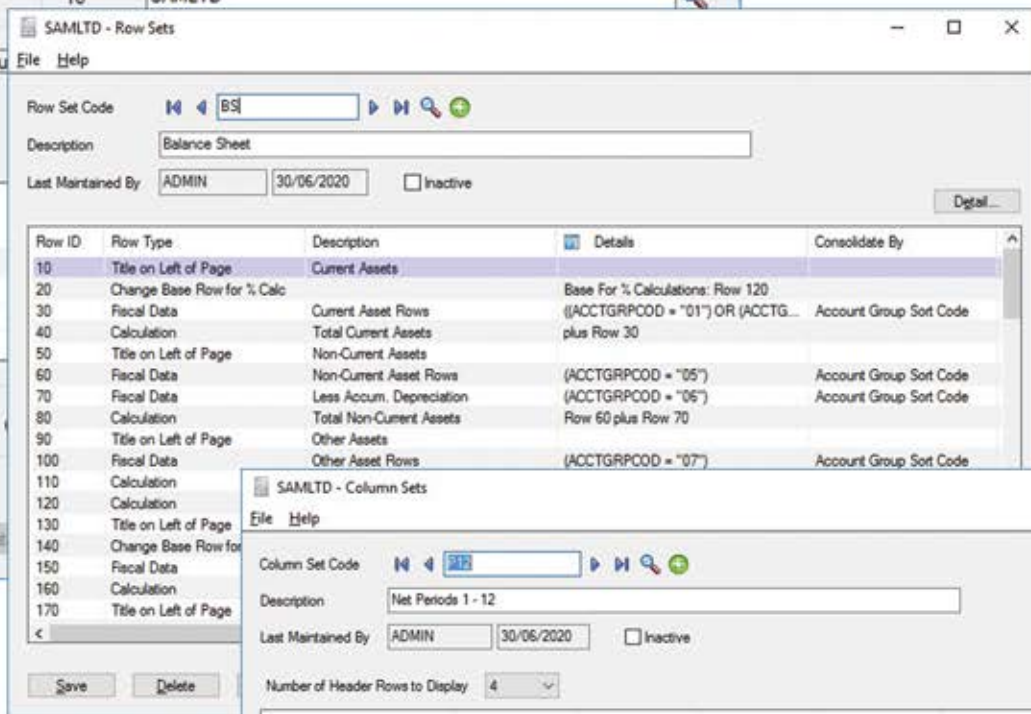

FRS reports work both on the desktop or in the cloud. This gives current or new Sage 300 users an upgrade path if they decide to move to the cloud later on. FRS can also report on multiple companies at the same time making consolidation software unnecessary.

# FRS™ Financial Reporter for Sage 300 & 300c

## The Ultimate Sage 300 FR

The standard Sage 300 Excel-based Financial Reporter is an extremely powerful reporting tool however the Excel interface has a steep learning curve and being Excel-based, it won't work with Sage 300c. FRS brings the same Sage 300 FR powerful functionality to an easy to use, point and click, standard Sage 300 interface and uses the same Crystal report writer as all the other Sage 300 reports. And being 100% developed in the Sage 300 SDK it will work with both Sage 300 and 300c and any other future Sage 300 technology.

## Features & Benefits

- Easy to use report designer
- Reusable row, column and data sets
- Multi-company reports/consolidations
- Schedule reports to run automatically
- Email reports to multiple recipients
- Easy to install, activate & print
- Format font, size, color, style etc.
- Add logos etc. in Crystal
- Report sets
- Point & click calculations
- Change the reporting currency
- Drilldown / Rounding / Provisional
- Output to printer/screen/Excel/PDF/HTML/Word/RTF/CSV/XML/Email
